Contact Information

For inquiries on our products in general, please make inquiries by e-mail or through our WEB form, or contact the nearest sales branch. Please feel free to

support@chukoh.co.jp

Introduction of catalogues by product:

We provide catalogues by product and leaflets with more details than the general catalogue. Please download from our website or feel free to contact support

About RoHS Directive compliant products:

We aim to make all of our products compliant to RoHS Directive. You can download certificate of non-use of RoHS directive substances from this QR code.

Please note that information in the catalog is subject to change without notice.

- Do not use for medical applications or other usages involving a contact with human body.
- Observe the related laws and regulations for disposal. Do not incinerate in any case.
- Do not use at the temperature exceeding the maximum service temperature.
- Please read the catalogue and product safety data sheet (SDS) on our website to maintain the original functions of product and ensure safe use.

CHUKOH FLO™

Products General Catalogue

Chukoh Chemical Industries, Ltd.

AIMING TO CREATE A FUTURE!

Since the foundation, we have been devoting particular attention to fluoroplastics which is a polymeric material with unique characteristics, and striving for research and development thereof. As a result, we have successfully combined fluoroplastics with other materials and commercialized highly value-added products made from fluoroplastics. Meanwhile, fluoroplastics has been increasing its possibilities and is expected to be used for new applications in many industries, including electricity, communication, machinery, foodstuffs, construction, and medical care. Further, based on the technical assets we have accumulated on fluoroplastics, we have entered new fields using high-performance plastics including silicone and super engineering plastics.

In keeping with our slogan, "Develop new products and open new fields," we will commit ourselves to the development of products in close cooperation with customers and strive to satisfy industrial needs, which are becoming increasingly diversified and sophisticated.

Heat resistance / Low temperature resistance

Continuous use possible at high temperature

Fluoroplastics have high heat resistance and low temperature resistance. That means it can be used in a wide range of temperature.

Insulation

Excellent electrical insulation

Fluoroplastics have high electrical insulation properties. They give outstanding performances as high frequency insulation material and insulation coating.

Lowest friction

Highest slippage

Fluoroplastics having the lowest dynamic friction coefficient among all solid materials show the least slippage

Non-stick property

Non-stick properties provide easy release

Fluoroplastic materials have unique non-stick surface characteristic that allows easy release.

Chemical resistance

Resistant to chemicals

The stable molecular structure of the fluoroplastic material is not affected by most of the commonly used chemicals and solvents. It can be safely used even under chemical environment.

Weatherability

Resistant to ultraviolet resistance

Fluoroplastics are substantially free of effects of visible light, ultraviolet ray or moisture. Suitable for long-time outdoor use.

CHUKOH FLO™ SKYTOP™

Japan's first permanent architectural faburic developed by Chukoh for membrane structures. It is a composite material produced by impregnating and sintering fluoroplastic on glass cloth (B yarn) by a unique method developed by Chukoh. Various types and grades are available according to the design and size of membrane structures.

Primary applications

Stadium / terminal / station platform / shopping street arcade / shopping center / swimming pool / tennis court / aquarium / gymnasium / exhibition hall / meeting place / factory / warehouse / etc.

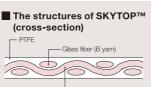

■ SKYTOPTM for structural materials is qualified by the Minister of Land, Infrastructure and Transport as the designated building material provided in Item2, Article 37 of the Building Standard Law. ■ SKYTOP[™] is also qualified by the same Minister as the

Characteristics

- noncombustible material provided in Item 9, Article 2 of the same Law. Excellent in durability and weather resistance.
- Excellent translucency that allows ample sunlight into inner space.
- Hard to attract dust or dirt, which keeps good appearance for long.

Main grades

- FGT-1000: for large-scale structures
- FGT-800: for medium to large-scale structures
- FGT-600: for small to medium-scale structures
- FGT-250 series: for interior ceiling material

INJECTION MOLDING PTFE SPECIAL POROUS PRODUCTS PROCESSED PRODUCTS PRODUCTS

HIGHLY FUNCTIONAL FILM BIODEGRADABLE & CHARACTERISTICS

These are composite materials of fluororesin or silicone resin on industrial cloth such as glass cloth or aramid cloth. We further fabricate these composite materials to offer our products in a wide variety of fields including chemical, machinery, electric, telecommunication and construction fields.

Main applications

release sheets / insulating materials / conveyor belts / sliding materials / heat seal release materials / etc.

Maximum service temperature

Glass cloth fabric: +260°C

Aramid cloth fabric: +200°C

G type fabric

This is a high-performance composite material obtained by impregnating and sintering fluororesin dispersion onto a glass cloth. This product has both mechanical strength of glass cloth and excellent characteristics of fluororesin. We also offer colored items.

It has excellent non-stick property, highest slippage, Characteristics heat resistance and chemical resistance.

It has excellent electric property with outstanding dielectric characteristic and dielectric breakdown strength.

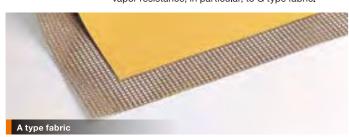

A type fabric / K type fabric

This is a high-performance material added antistatic effect. You can use this for any application where you have a static electricity problem.

Basic properties are similar to those of G-type. Characteristics

This product has superior mechanical strength and vapor resistance, in particular, to G type fabric.

Antistatic type fabric

This is a high-performance material added antistatic effect. You can use this for any application where you have a static electricity problem.

Characteristics Basic properties are similar to those of G-type.

We can offer black or gray colored product depending on the application.

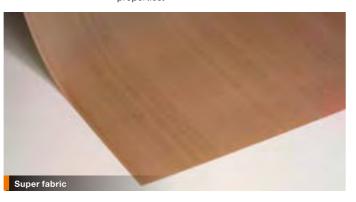

This fabric has superior anti-penetration property, durability and the highest slippage characteristic to G type fabric.

Characteristics

Especially, it has excellent non-stick property and releasing ability.

It has excellent anti-penetration and gas barrier properties.

MS fabric

This fabric has the enhanced release effect by forming a special resin layer on the surface of G type fabric.

Characteristics

Especially, it has excellent non-stick property and releasing ability.

CHUKOH FLO™ Adhesive Tapes (Chukoh Tape)

Chukoh Tape is a general term for high-performance adhesive tapes manufactured by us.

They are made and processed by applying adhesive to fabric, fluoroplastic film, polyimide film and other products.

Main applications

Enhance slippage in chutes and hoppers/Covering of drier rolls used for nonwoven cloth and paper/Covering for pressure-bonded heat seals/Heat-resistant bundling of wires and cables/Wrapping of wiring connections/etc.

- The surface of fluoroplastic tape has excellent non-stick property, lowest friction and chemical resistance. **Characteristics** Some types can be used up to 250°C.
 - It has excellent electric insulation.
 - We also manufacture adhesive tapes of silicone and

■ UL standard certification (UL File No.E105318)

CHUKOH FLO™ Adhesive Tape ASF-110FR, ASF-121FR, ASF-116T FR, ASF-118A FR, AGF-100FR, AGF-100FR ORANGE, API-114A FR, and ACH-5001FR are UL510A

Teflon™ is a trademark of The Chemours Company FC, LLC used under license by Chukoh Chemical Industries, LTD.

■ The "FR" suffix

In response to being certified for the UI. standard, the "FR" suffix was added to the names of a number of products on July 1, 2009. These products remain the same as previous products as no changes have been made to their specifications, quality, or manufacturing processes.

INJECTION MOLDING PTFE SPECIAL POROUS PRODUCTS PROCESSED PRODUCTS PRODUCTS

HIGHLY FUNCTIONAL FILM BIODEGRADABLE & CHARACTERISTICS

Values shown in this table represent measurements and do not constitute guaranteed values. *Please consult us separately for the dimensions other than above. *The adhesive force for AGF-100FR ORANGE, ACH-5001FR were measured by peeling it at 90° (NZ5mm).

* API-214A and API-214AE are double-sided adhesive tapes. * API-214AE Archesion at peeling angle of 180° (N/25mm): Light adhesive side/0.15, Strong adhesive side/7 *1 Comply with Food Sanitation Act Amendment (enforced from June 1, 2020) in Japan as food apparatus, containers and packaging.

CHUKOH FLO™ Belts

The belt products are manufactured by using our fabrics, etc. as the base material and processing them into an endless belt shape. By applying excellent properties of fluororesin, such as heat resistance and non-adhesive characteristic, they are used in manufacturing process of a wide range of fields. We can offer you a wide variety of our belt products according to your needs.

The belt surface has excellent non-stick characteristics and highest slippage.

It is also excellent in dimensional stability, non-flammability and heat resistance. Various joint methods are available according to the applications.

True tracking is available to prevent the belt from meandering.

G type belt: +260°C Maximum Super belt: +260°C service A type belt: +200°C temperature

R type belt: +180°C (It varies depending on the rubber base material to be selected.)

A special catalogue for belts with more details is also available.

G type belt

Characteristics

This is the standard type which is used in the most applications. Upon your request, we can manufacture antistatic or seamless type belts.

Base material Fluororesin impregnated glass cloth

Main applications

Food manufacturing / plastic film manufacturing / rubber product manufacturing / ceramic product manufacturing / heat seal process / adhesive applying process / UV drying process / food thawing process / etc.

Super belt

Anti-penetration property and non-stick property of this belt have been remarkably improved from those of conventional belts. This is especially suitable for usage where a large amount of oils and fats are used.

Base material

Fluororesin impregnated glass cloth + special treatment

Main applications Conveyor belts for pizza dough making / hamburger steak, biscuit, fried dumpling baking

The bending fatigue resistance and vapor resistance are superior to the G type.

Base material

Fluororesin impregnated Para-Aramid cloth

applications

Conveyor belts for steam cookers / drying belts for woven or nonwoven cloths, etc.

This is a unique belt, of which rubber material surface is vulcanized, and fluororesin film or fabric is laminated thereto. Therefore, fluororesin properties have been added to the strength and flexibility of the rubber belt. You can select color and material compositions from a wide variety according to your applications.

Base material Fluororesin film + Rubber base material

G type fabric + Rubber base material

Rubber base material

Nitrile rubber (NBR) / Isobutylene-Isoprene rubber (IIR) / Chloroprene rubber (CR) / Acrylic rubber (ACM)

Main Belts for food conveyance / rubber and resin conveyance / applications appearance inspection / metal detector / industrial material

weighing machine, etc.

COPPER-CLAD LAMINATE

CHUKOH FLO™ Copper clad laminates

The products have been made by the method that electrolytic copper foil is fused on one or both sides of laminated Fabrics or fluoroplastic films. They are used as a substrate of printed circuit board, especially for high-frequency band use and also for other applications. You can select from a wide variety of types according to the required properties.

UL Standard

(UL File No.E78936) CHUKOH FLO™ Copper-clad laminates CGP-500A and CGS-500A, have been certified by the UL Standard.

certification

Main

applications

CGP-500 series

CGS-500 series

CGN-500 series

This product has excellent heat resistance.

mounted devices, etc.

This is our standard grade copper-clad laminated board using fluororesin impregnated glass cloth. It has excellent peel strength,

This is a copper-clad laminated board using fluororesin impregnated

dielectric constant and dielectric tangent compared to the CGP-500

This is a copper-clad laminated board using fluororesin impregnated

glass cloth. The dielectric loss has been reduced to less than a half of

low water absorption, through-hole processability and high

glass cloth and fluororesin sheet. This product has improved

that of CGP-500 series and this product shows an excellent

dimensional stability and mechanical strength.

A stable dielectric constant is ensured in a wide frequency band range. Characteristics

Satellite communications / satellite broadcasting / next generation

mobile phone and other mobile communication systems / non-stop

(AHS) of the ITS (Intelligent Transportation System) / Wireless Local

Loop (WLL) / CPU / measurement instruments / artificial satellite

Electronic Toll Collection (ETC) system and Automated Highway System

An extremely low dielectric tangent is ensured in a high frequency

CGA-500 series

This is a copper-clad laminated board using fluororesin impregnated glass cloth containing special inorganic filler. While maintaining excellent high frequency characteristics, this product can be applied for mass production.

CGH-500 series

This is a copper-clad laminated board using fluororesin impregnated glass cloth containing special inorganic filler. As the dielectric constant is equivalent to the general purpose board and the dielectric tangent is lower, a Cupper clad laminated board with lower loss can be obtained in the same design.

CGK-500 series

This is a copper-clad laminated board using fluororesin impregnated glass cloth containing special inorganic filler. Due to the high dielectric constant, smaller and lighter high-performance circuit with lower loss can be obtained.

General characteristics

performance with 20 GHz or over.

^{*} We can also manufacture belts without using fluororesin.

^{*} Values shown in this table represent measurements and do not constitute guaranteed values.

This is a tube product with a thin wall made by molding of fluororesin of various types.

Due to its excellent heat resistance, non-adhesive characteristics, chemical resistance, electric insulation, etc., this is used in a wide range of industrial areas.

Main applications

Chemical plants / semiconductor manufacturing equipment and devices / food manufacturing equipment and devices / laboratory instruments / automobile parts / transfer tubes for chemicals, fuels, oils and steam / insulating coatings

Maximum service temperature

PTFE tube: +260°C PFA tube: +260°C

FEP tube: +200°C

■ UL standard certification (UL File No.E71017)

We can also offer UL Standard certified CHUKOH FLO™ Tube (PTFE).

PTFE tube TUF-100

This is a tube made by extrusion molding of fluororesin PTFE. We also manufacture colored tubes (made-to-order).

PFA tube TUF-200 (EN·ES)

This is a highly transparent tube formed by melt- extrusion of fluororesin PFA. We manufacture EN, a resin grade for general use, and ES, a resin grade for semiconductor use. ES is a high-purity PFA tube for semiconductor manufacturing equipment with excellent smoothness on the inner surface of the tube and low elution ions.

FEP tube TUF-300

This is a highly transparent tube formed by melt-extrusion of fluororesin FEP. Basically, it has almost the same characteristics as those of PFA. * This is a made-to-order product.

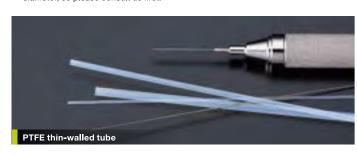

PTFE thin-walled tube

This product is a fluororesin PTFE tube with ultra-thin wall thickness. This tube can also be bonded, so it can be used for combination with other materials.

This tube can be manufactured with an inner diameter of 0.4 mm to 2.3 mm and a wall thickness of several µm to 100 µm.

*The wall thickness that can be manufactured varies depending on the inner diameter, so please consult us first.

 $^{^{\}star}$ The minimum bending radius is a value at room temperature. Use the product with a bending radius higher than the minimum bending radius.

^{*} Values in the table may vary depending on the usage environment. Perform tests sufficiently in the same environment before use to make sure that no problem

^{*} Please consult us separately for UL Standard certified PTFE tubes.

^{*} The tolerance of the standard TUF-100 series is that of the Type A size shown in

CHUKOH FLOTM Processed Tubes

We perform processing of fluororesin tubes by our original molding method. You can select from various dimensions and standards.

Main applications Semiconductor manufacturing equipment and devices / optical equipment / chemical-resistant piping for electric and electronic applications, and laboratory applications

Heat shrinkable tube (PTFE / PFA / FEP)

The characteristics of fluororesin can be given to the surface of the material to be coated (PTFE / PFA / FEP) by thermal shrinkage.

Typical dimensions for PTFE heat shrinkable tube TKF-100 series

Product code	Pre-shrinkage inner diameter (mm)	After shrinkage diameter (mm)	Wa ll thickness (mm)	Length (m)	Standard items
TKF-100-2	2.0	1.2			0
TKF-100-4	4.0	2.2			0
TKF-100-6	6.0	3.2			0
TKF-100-8	8.0	4.2			0
TKF-100-10	10.0	5.2			0
TKF-100-12	12.0	6.2			0
TKF-100-14	14.0	7.2	0.5	1	0
TKF-100-16	16.0	8.2	0.5	'	0
TKF-100-18	18.0	9.2			0
TKF-100-20	20.0	10.3			0
TKF-100-22	22.0	11.3			0
TKF-100-24	24.0	12.3			_
TKF-100-26	26.0	13.3			-
TKF-100-28	28.0	14.3			_

- * After shrinkage inner diameter is not a guaranteed value, as the value is measured at 350 °C after heating in an electric furnace.
- * Please consult us separately for the products with wall thickness / cut length other than those described in the table above.
- * The wall thickness is measured after shrinkage.

Processed tubes

Flared processing, three-dimensional bend processing and other processing according to your needs.

Thin FEP heat shrinkable tube TKF-310

This product is a thin FEP heat shrinkable tube. It can be manufactured with an inner diameter of approx. 0.5 mm after shrinking.

Product code	Pre-shrinkage inner diameter (mm)		Wall thickness (mm)	Length (mm)	Standard items
TKF-310-050	1.1 or more	0.5 or less	0.32±0.03	1800	0
TKF-310-085	1.7 or more	0.85 or less	0.28±0.03	1000	0

- * This is a made-to-order product.
- * After shrinking, the value for the diameter is not guaranteed, as the value is measured after heating at 260°C for 10 minutes.
- * Please consult us separately for the dimensions other than above

Snakle hose: S series

This is a PTFE hose molded in a spiral shape. Due to its flexibility, the product has less liquid accumulation.

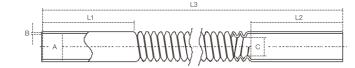

* We offer PFA hose I series molded into a continuous independent bellow shape

Snakle hose S series (PTFE type)

Nominal dimensions (mm)	Processing range for inner diameter of straight part A (mm)	Wall thickness (mm)	Effective inner diameter C (mm)	radius	Burst pressure (MPa)	Length L1, L2 (mm)	Overall length L3 (m)
4×7	4.5~6.0		4.0	10	1.5		
5×8.5	5.5~8.0		5.0	14	1.1	15~30	
7×11	7.5~10.0	0.5	7.0	16	0.8	15~35	10
9×13	9.5~12.0		9.0	18	0.6	15~40	
11×16.5	11.5~14.5		11.0	20	0.5	15. 540	

- * The effective inner diameter is a reference value.
- * As the burst pressure and bending radius measurements were obtained at room temperature, these values are not standard values.
- * Please consult us separately for the dimensions other than above.

INJECTION MOLDING PRODUCTS

CHUKOH FLO™ Injection molding products

In addition to fluororesin, we perform injection molding of high-performance engineering plastics with excellent characteristics. Also, since we perform in-house production of molds, we can make quick response. There are a wide range of applications such as semiconductor, automobile, laboratory apparatus and OA equipment applications.

Conveyor equipment for thin plate items / driving gears for rotary shaft, etc.

Fluororesin: PFA/PVDF/ETFE An example of materials we High-performance resin: PEEK/PSU/PPS/4-6PA/PEI actually use General-purpose resin: PP/PE/PC/PVC

Plastic conveyor rollers

Main

applications

Since rollers can be jointed each other, original conveyor parts with number of rollers arranged can be manufactured. Please consult us separately for sizes, materials and

Injection molding products

It is an injection molding product of high-performance plastics such as fluororesin. As an extremely high clean level is required for semiconductor related products, all the processes from molding to inspection and packing are controlled in the clean room.

CHUKOH FLO™ PTFE special processing products

We can also offer various PTFE special processing products mainly by manufacturing of tanks with the PTFE properties. We respond to your needs with our expertise technology.

Main applications

Semiconductor applications / washing tanks (silicon wafer, etc.) / temperature control washing tanks / chemical storage / mechanical processing parts such as packing, gasket and bearing

PTFE integrated tank

This is the PTFE tank that is manufactured by the isostatic molding method.

As it is made by integrated and seamless molding, there is no worry about leakage, etc.

As we also manufacture overflow tanks, single tanks and round tanks, you can select the size, shape and processing method according to your purpose.

Seamless molding can be performed.

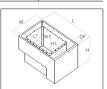

- **Characteristics** The cost of molds is not required and cost performance is ensured.
 - Various sizes and shapes are available.

Table of dimensions of single tank

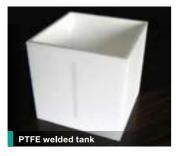

PTFE welded tank

Custom-mode product to be manufactured by our experienced welders to the satisfaction of the customer. The maximum size we delivered is 2.0 m \times 2.5 m \times 0.2 m.

Characteristics

- We manufacture in a clean environment from welding to cleansing and packaging.
- With our original jigs and advanced technology, welding can be implemented even on a section where it is usually difficult to perform welding.
- Welders who obtain in-house qualification have advanced technique and perform

Machined products

Materials cut and processed into various shapes according to user specifications. They are used in various fields as parts having heat resistance, chemical resistance and non-stick characteristics

POROUS PRODUCTS

C-Porous[™] PTFE porous products

This is the product that is made by giving a porous structure to PTFE with our original technology. As shown by the meaning of porous that it has "many" "pores", it has both air permeability and water repellency while maintaining characteristics of fluororesin.

* C-Porous™ is a collective designation of our fluororesin porous product:

PTFE porous films: filters / waterproof breathable membrane / electric wire coatings / cable protection / heat insulation

PTFE porous tubes: filters / oxygen sensors / bubbling / degassing / inlet-exhaust equipment

PTFE thick porous tubes: chemical protection / heat insulation / piping protection

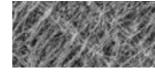

PTFE porous film

applications

Main

This porous film constitutes of PTFE. While it keeps air permeability due to the pores, it maintains waterproof and water repellent performance.

punching processed products are also

Product code	Thickness × Width (mm)	Length (m)	Porosity (%)	Air permeability (sec)	Waterproofness (kPa)	Characteristics	
SEF-010	0.1×100	10~100	65	18	120	Water repellent	
SEF-010(HB)	0.2×100		76	13	80	Water repellent	
SEF-010-3	0.2×100		65	20	140	Water and oil repellent	
* Values shown in the table above represent measured values and do not constitute standard value							

- * Air permeability values are those measured by a Gurley air permeability tester compliant with JISP8117.
- * For performance and sizes other than those described above, please consult us separately

PTFE porous film composite product

This is a product that is made by combining a PTFE porous film with a backing material. This product has better air permeability and water-resistant property as compared to the SEF-010 series. This product is available in sheet or punched shape.

Product code	Thickness × Width (mm)	Length (m)	Air permeability (sec)	Waterproofness (kPa)	Characteristics	Backing material	
SEF-501N	0.05.000	10~50	5	380	_	PET	
SEF-503N	0.05×300 0.08×300		6	350	Oil repellent	non-woven cloth	
SEF-501M			3	330	_	PET	
SEF-503M			4	280	Oil repellent	mesh	

- * Characteristic values shown in this table represent calculated or measured values and do not constitute quaranteed values. * Air permeability values are those measured by a Gurley air permeability tester compliant with JISP8117.
- * For performance and sizes other than those described above, please consult us separately

PTFE porous tube

This porous tube constitutes of PTFE.

It has high water repellency and air permeability, and it can be changed by adjusting the porosity. We can also manufacture rod-shaped products and multi-lumen products.

Product code	Inner diameter × Outer diameter (mm)	Length (m)	Porosity (%)	Air permeability (sec)	Waterproofness (kPa)	
	Ф1×Ф2			100		
	Ф2×Ф3	2×Ф3		60	80	
TEF-100	Ф3×Ф4	10		130		
	Ф8×Ф10			_	90	
	Ф10×Ф12		70	_	80	

* Values shown in the table above represent measured values and do not constitute standard values * Air permeability is measured by a JISP8117 compliant Oken air permeability tester.

PTFE thick porous tube

This product is a thick porous tube.

By giving a porous structure to PTFE by expansion, it has excellent flexibility and heat insulating characteristics. We can manufacture in a complex shape and split processing is also available.

Product code	Inner diameter × Outer diameter (mm)	Inner diameter tolerance (mm)	Wall thickness (tolerance) (%)	Length (tolerance) (mm)	Porosity (tolerance) (%)
	Ф10.0×Ф17.0				
TEE 440	Ф13.7×Ф20.7	0.7/10	3.5 (-0.5/+0.4)	500	80
TEF-110	Ф20.0×Ф27.0	-0.7/+1.0		(0/+100)	(±10)
	Ф26.4×Ф33.4				

^{*} Values shown in the table above represent measured values and do not constitute standard values.

Highly functional films and other products

We manufacture a variety of highly functional resin products such as films and sealing tapes for piping using fluororesin and polyimide as base materials.

Main applications

- MSF series: Release at ACF pressure bonding / sliding in OA equipment
- FPI series: Release sheet / insulation sheet
- Sealing tape: Piping for water pipes and hydraulic
- G type laminate: High-voltage insulating plates / bearing materials / seismic isolation materials

■ UL standard certification (UL File No E496281

CHUKOH FLO™ Skived tape MSF-100: The tape with the thickness between 0.05 mm and 1.00 mm is a UL Standard certified product.

Skived tape MSF-100

This product is made by skiving and processing PTFE into a thin film. There are a wide variety of width and thickness. It is used for releasing at ACF pressure bonding, electric insulation, and sliding

Typical dimensions for skived tape MSF-100

Thickness (mm)		Standard	Tolerance of	width (mm)	Length
Dimension	Tolerance	width (mm)	300 or more Less than 360	360 or more 600 or less	(m)
0.05	±0.01	50 • 100 • 300 • 500			
0.08	±0.01	300

0.40	±0.04	300			
0.50	±0.05	50 • 100 • 300 • 500			
0.80	±0.08	300.500			
1.00	±0.10	300			

^{*} We can manufacture products with widths up to 1,000mm when thicknesses are 0.30mm or less.

Skived tape MSF-100 one side (E)

This is the PTFE skived film that allows bonding with other materials by performing surface treatment on one side of MSF-100.

* Please consult us separately for dimensions and stock condition.

Skived tape MSF-200

This is the PTFE skived film that has improved strength and reduced flare and warpage during the processing by performing special * Please consult us separately for dimensions and stock condition.

Skived tape MSE-100

This is the PTFE skived film that has an embossed surface. Due to its fine unevenness, the release characteristics have been improved compared to that of MSF-100. (Compared within our * Please consult us separately for dimensions and stock condition.

FPI series

This is the product that is made by coating fluororesin onto a polyimide film. While maintaining dimensional stability equivalent to that of glass cloth coated products, it also ensures surface

Sealing tape SST-100

This is an unsintered PTFE tape that is used for sealing of various kinds of piping screws. As it is soft and self-adhesive, sealing work can be easily done. As it does not deteriorate in quality for a long period of time, removing work is also easy

G type laminate

G type fabrics are laminated in many layers and shaped into various configurations. It has excellent electrical and mechanical

BIODEGRADABLE & BIOPLASTICS

Amity[™] biodegradable and biobased plastics

We are promoting research and development of environmentally friendly products such as biodegradable plastic products and biobased plastic products. We offer products in shapes that meet your needs.

applications

- Biodegradable plastic products: For civil engineering and composting utilizing biodegradable properties
- Biobased plastic products: Daily necessities for general household use

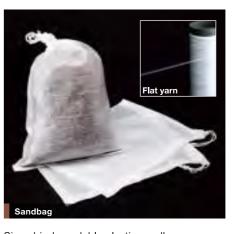

Biodegradable plastic products

They are made from plastic that is degraded into water and CO₂ by the action of microorganisms. Therefore, they do not remain as microplastics when used in a natural environment.

These compostable bags are used by local governments throughout Japan as bags for collection of food waste.

After collection, the bags with food waste in them can be composited at compositing

Since biodegradable plastic sandbags are degraded by the action of microorganisms, they do not require collection or disposal as industrial waste, contributing to reduction of disposal costs. We can also provide flat yarn, the material used for sandbags.

This product is a stretch film made of biodegradable plastic to prevent cargo collapse. The elongation and strength of this product is comparable to those of general polyethylene films.

Biobased plastic products

These products are made from plant-derived raw materials, such as corn.

They contribute to reduction of CO₂ because they are made from plants that grow up absorbing CO₂ during the process of photosynthesis.

These bags contain biobased plastic. They are made from plant-derived raw materials, contributing to reduction of CO₂.

Although this product is made from environmentally friendly corn-derived polylactic acid (PLA), it has superior water resistance and durability compared to paper products.

Draining nets are made from corn-derived polylactic acid (PLA).

INJECTION MOLDING PRODUCTS

^{*} Please contact us separately for details, such as shapes other than the above and sizes that can be manufactured. *The cutlery and draining nets are also biodegradable.

caused prior to the use.

INJECTION MOLDING PTFE SPECIAL POROUS PRODUCTS PROCESSED PRODUCTS PRODUCTS

HIGHLY FUNCTIONAL FILM BIODEGRADABLE & BIOPLASTICS

<sup>Reference: Dictionary of Polymer technology
Although the chemicals listed in the table are chemically inactive (it is clear that it does not cause any chemical reaction), it may cause a problem when it is subject to physical action such</sup> as permeation due to temperature, pressure, or chemical concentration.

• As the descriptions in the table are used only for "reference" and do not "guarantee" the product, please perform sufficient tests in the same environment and ensure that no problem is

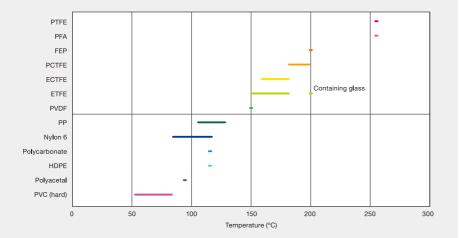

^{*} The table above is extracted from "Fluoroplastics Handbook" by the Japan Fluoropolymers Industry Association.

Comparison of properties between Fluoroplastics and other plastics

■ Comparison of Properties between Fluoroplastics and Other Plastics*1

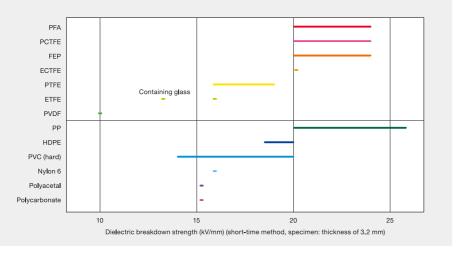

Continuous Service Temperature (not loaded)

- Fluoroplastics are in the top group among plastics on this property.
- In particular PTFE and PFA are the highest at 260 °C.

Dielectric breakdown strength

- As the values are generally high, it is an excellent insulating material.
- PVDF has a slightly low value.
- Addition of other substances makes the value lower. (e.g.: glass)

■ Surface wettability of various plastics*1

Name	Water contact angle (degree)	Adhesion energy (N/m)			
FEP	115	0.042			
PTFE	114	0.043			
PFA	The same level as FEP and PTFE				
Silicone resin	90~110	0.048~0.073			
Paraffin	105~106	0.053~0.054			
Polyethylene	88	0.075			
Polyamide	77	0.098			
Phenol resin	60	0.109			

^{*1} The data described above are partially cited from "Handbook on Fluoropolymers" of the Japan Fluoropolymers Industry Association.

Friction coefficient data

- Thousan occinioloni data								
Test piece	Measurement result							
(material)	Static friction coefficient (µS)	Dynamic friction coefficient (μD)						
PTFE plate	0.11	0.09						
G fabric	0.15	0.14						
A fabric	0.15	0.13						
Polyurethane	0.82	0.70						
PVC plate	0.31	0.33						
Nylon plate	0.17	0.15						
Polyacetal plate	0.20	0.16						
Silicone rubber	7.96	7.89						
SS steel plate	0.24	0.20						
The annual color of the color o

HISTORY and DEVELOPMENT

Established Chukoh Fibers Company Ltd. on March 29 and changed the company name to Dodge Fibers Company of Japan on the same day. Constructed a plant in Matsuura City, Nagasaki Prefecture and started full-scale production of fluororesin products Changed the company mane to Chukoh Chemical Industries Ltd. 1977 Launched the development of bio-degradable plastic products (Amity™). Completed the Matsuura factory No.2 for exclusive production of fabrics (F3 Matsuura factory) Completed the Utsunomiya factory in Kanuma City, Tochigi Prefecture (for tubes and extrusion and molding products) 2004 Established SC (Specialty Coating) Division and started the automobile side-curtain airbag product business. Completed the SC factory. 2007 Achieved the sales exceeding 10 billion yen for the first time. 2008 Established Chukoh Membrane Corporation (for selling TiO2 coated fluoropolymer membrane products). Established Chukoh Belt Corporation (For selling, installation, maintenance of fluoropolymer belts) Completed a plant for the exclusive production of adhesive tapes (F4 Matsuura factory) Established Chukoh Chemical (Shanghai) Trading, Ltd. (our subsidiary company for sales in China). Established Chukoh Chemical Fluorine Plastic Product Changshu Co., Ltd. (our subsidiary company for manufacturing in China). Established a representative office in Bangkok, Thailand. Established Chukoh Chemical (Thailand) Co., Ltd. (our subsidiary company for sales in Thailand and ASEAN) 2014 Received Grand Prize of the 48th Good Company Award. Received 2015 Regional Vitalization Company Award (Award by Minister for Internal Affairs and Communications). 2018 Completed F1 Matsuura factory. 2021 Completed Utsunomiya WEST WING. Completed F1 EASTWING 1 More... **OFFICES**

Osaka Office

Chukoh Chemical Industries has been certified under ISO 9001 and 14001, which are nternational standards for quality and environmental management.

Scope of registration / Design, manufacture, and sale of products containing fluororesin and products with fluororesin or silicone resin coatings. Design and management of consignment manufacturing of biodegradable resin products
